

Is MetaTrader available for Mac?

The MetaTrader 5 (MT5) platform is available for OS X users. As MT5 is a native Windows application, you will need to follow these simple steps to get you started.

Firstly, you will need to install the Wine Bottler application, a piece of software that allows you to run Windows applications on OS X. You will need to go to [the product's official website](#), and download the application.

Once downloaded (in *.dmg image format), launch the program from the 'Downloads' folder of your OS X. You will then need to drag the Wine bottler icon into the 'Applications' folder, and open the application. This will launch the program.

Leave the boxes unchecked and after clicking 'Next' it will automatically check and install the necessary components.

Now this is complete, you can close this window, and move on to installing MT5.
